

# actesy AG is part of the weXelerate startup ecosystem

Swiss integration specialist wins with „Connecting Digital Worlds“ concept

Vienna/ St. Gallen, 26 November 2019

**That was convincing in Vienna. The Swiss start-up actesy AG was able to assert itself in a group of around 250 young companies in the most recent tender of the Viennese Accelerator weXelerate for the next round of its four-month promotion programme. The aim of weXelerate's "Multi-Corporate-Collaboration-Program" is to promote start-ups through mentoring, business angels and further education in their own training programs, but also through the creation of networks between start-ups, scale-ups and established companies.**

“We see the fact that weXelerate chose us for this program from a huge group of applicants as a recognition of our business idea,” says actesy CEO Andreas Imthurn. “At the same time, it is a wonderful opportunity for a Swiss start-up to establish contacts and gain a foothold in the Austrian market. After the support from the University of St. Gallen and various major projects in Germany, this is further recognition for the startup.

With the actesy metadata framework, actesy has created an integration hub that connects different application worlds and thus gives users the opportunity to transform their existing business processes through digitization. Companies from the automotive industry, the banking sector, the real estate industry and mechanical engineering in Switzerland, Germany and Austria have already modernized their digital landscape with the help of the actesy metadata framework.

actesy will use the next four months to strengthen its own awareness, especially in Austria. A branch in Vienna will start its work before the end of this year. In addition to the headquarters in St. Gallen, there are already locations in Berlin and Tübingen.

## Company actesy AG

actesy was founded in 2017 by a team of experienced IT specialists and young founders. With a background of more than three decades of experience in complex IT projects, the team around founder and CEO Andreas Imthurn has developed a flexible and dynamically usable metadata framework that allows users to link different software packages and application architectures process-oriented without programming knowledge, resulting in a homogeneous application world with a uniform database, user interface and consistent processes. In this way, even older software solutions can be transformed into the digital world.
