

# Peter Imthurn goes on board at actesy AG

„connecting digital worlds“ – Now with 30 years of experience in migration projects

St. Gallen / Berlin, 03. October 2018

After 30 years of successful managerial activity in ERP projects, Peter Imthurn is now moving from ERP provider GUS Schweiz AG to actesy AG as Chairman of the Board of Directors. The startup, which was founded last year, aims with the actesy metadata framework at integration projects in the area of enterprise software. actesy concentrates especially on the extension of legacy solutions with components of the digital economy: eCommerce applications, mobile apps or systems in the Internet of Things can be linked with the existing business application world in the company.

“The ERP mission is complete,” explained Peter Imthurn after the change. “The challenges posed by digital change lie in the fact that agile companies adapt individually to changing customer requirements. This is a completely different business model that poses new challenges in the interaction of software.”

With this framework, actesy not only targets the ERP market, but also all complex software structures that need a breakthrough if they need to be prepared for digital change.

This applies to banking systems as well as production software. The startup has already received inquiries from practically all industries – but above all from the automotive, finance and retail sectors.

The actesy framework enables users to independently implement their individual digital strategy. Training concepts and a development environment for the framework that is as user-friendly as possible should help to create own solutions without programming knowledge. Peter Imthurn: “Software integration should work by drag-and-drop. actesy stands for act easy! This is my credo from 30 years with an IT migration background.”

## Company actesy AG

actesy AG was founded in August 2017 from the experience of numerous ERP and digitization projects. The actesy framework is a particularly suitable accelerator for digital transformation, because actesy can be used as a kernel for new applications of the digital economy. actesy is an easily adaptable metadata framework, which enables access to data, key figures and processes in real time via an intuitive user interface. actesy can map innovations and simplifications of core processes in companies.
